Spring REST @OneToOne : Practice 2

```
class Account
{
    // already created Account class

    DebitCard   debitCard

}
```

```
class DebitCard
{
    long cardNumber;
    int pin; // default value=1234
    String expiryDate;
    boolean cardStatus;
    boolean isBlocked;

}
```

Based on the previously created application implement the following tasks.

1) Link Debit card with Account.
2) DebitCard pin has a default value of 1234 always, which the user has to be updated.
3) cardStatus default value should be true
4) If the user request to block the card , then cradStatus should become false
5) Once card crosses the date of expiry, then cardStatus becomes false.
